TREATMENT PROTOCOL: RESPIRATORY DISTRESS *

- 1. Basic airway
- 2. Oxygen/pulse oximetry
- 3. Venous access prn
- 4. Cardiac monitor: document rhythm and attach ECG strip if dysrhythmia identified
- 5. Advanced airway prn
- 6. Consider CPAP for patients greater than 14 years of age with moderate-to-severe respiratory distress and SBP equal to or greater than 90mmHg 2
- 7. If absent or diminished breath sounds due to severe bronchospasm, refer to Wheezing column
- 8. If suspected allergic reaction/anaphylaxis, treat by Ref. No. 1242, Allergic Reaction/ Anaphylaxis

•			
STRIDOR	WHEEZING	BASILAR RALES CARDIAC ETIOLOGY	POOR PERFUSION
9. CONTINUE SFTP or BASE CONTACT	9. Albuterol 5mg via hand-held nebulizer, may	9. Nitroglycerin SL 0.4mg for SBP	9. ESTABLISH BASE CONTACT (ALL)
10. If severe respiratory distress and croup suspected:	repeat one time Pediatric: See Color Code Drug Doses/ L.A. County Kids	equal to or greater than 100mmHg <i>0.8mg</i> for SBP equal to or	10. Consider: Normal Saline fluid challenge 10ml/kg IV at 250ml
via hand held nebulizer Pediatric: See Color Code Drug	1yr of age or younger: 2.5mg 1yr of age or older: 5mg	greater than 150mmHg 1.2mg for SBP greater than 200	increments 11. Dopamine (Adult Administration Only)
Doses/ L.A. County Kids 1yr of age or younger: 2.5mg diluted with 5ml	Wheezing may be an initial sign of pulmonary edema; therefore, reassess breath	May repeat in 3- 5min two times, administer subsequent doses based on SBP	400mg/500ml NS IVPB Start at 30mcgtts/min titrate to SBP 90-
normal saline via hand-held nebulizer 1yr of age or older: 5mg	sounds frequently 10. CONTINUE SFTP or BASE CONTACT 11. If deteriorating	listed above Hold if SBP less than 100mmHg or patient has taken sexually	100mmHg and signs of adequate perfusion or to a maximum of
diluted with 5ml normal saline via hand-held nebulizer Maximum total	respiratory status: Epinephrine 0.3mg (1:1,000) IM Pediatrics: See	enhancing drugs within 48hrs May administer prior to venous access	120mcgtts/min 12. Consultation with base physician strongly recommended
dose 5mg Hold for heart rate greater than 200bpm	Color Code Drug Doses/L.A. LA County Kids 0.01mg/kg (1:1,000) IM,	If hypotension develops, place patient supine and prepare to assist ventilations	
	maximum single dose 0.3mg for patient weight 30kg or greater Monitor vital	10. If wheezing: Albuterol 5mg via hand- held nebulizer, may repeat one	
	signs frequently after administration	time Reassess breath sounds frequently May be given

TREATMENT PROTOCOL: RESPIRATORY DISTRESS *					
	Due to cardiovascular effects, caution in patient older than 40yrs of age or pregnant	with nitroglycerin based on clinical assessment of the individual 11. CONTINUE SFTP or BASE CONTACT			

SPECIAL CONSIDERATIONS

- Acute respiratory distress, consider:
 - Foreign body obstruction
 - Epiglottitis/croup
 - Spontaneous pneumothorax
 - Inhalation injury
 - Pulmonary embolism
- **2** CPAP may be initiated for moderate-to-severe respiratory distress at any time during treatment unless contraindicated
 - Providers utilizing CPAP should follow departmental and manufacturer's recommendations
 - Monitor vital signs frequently; be prepared to assist ventilations if the patient worsens on CPAP or is unable to tolerate therapy
